

HEAT EXPERIENCE

**BATTERY HEATED GLOVES
USER MANUAL**

GLOVE OVERVIEW

BEFORE USE

Congratulations on your new Heat Experience Heated Gloves. Before you start using them there are some things you should know.

1

The batteries Heated Gloves should be fully charged before first use, or after a long period (2 months or more) of no use.

Charge the battery by connecting both batteries to the supplied charger. When the red light is lit, charging is ongoing.

Charging takes about 3 hours, When charging is complete, the red light turns off, and a green light turns on.

The heated gloves have three different heating levels. We recommend that you get to know how they work for you before you head out on longer lasting adventures.

QUICK TIPS!

Care of gloves & leather

EN

2

The palm of the gloves are made of sheep leather. This ensures a good grip and durability, but it is important to take good care of the gloves to keep them this way.

Treat the leather parts of the glove with suitable leather treatment, and let dry properly before use.

This simple steps will ensure that your glove will last longer.

Read the care instructions for more information about how to best take care of your gloves.

USE

Getting started

3

Open the zipper on the battery pocket and connect the battery to the cable before inserting it into the pocket. The button will blink three times, if not, the battery needs recharging.

For optimal comfort, make sure that the cables runs in a smooth way.

Press and hold the button on the glove for ~3 seconds, until the light turns on. The glove is now heating up, and the red light should be blinking slowly. This process takes about 5 minutes. you can pres the button once more to go directly in to one of the modes, this will however reduce the “heat boost effect”

1. CHARGE BATTERY

2. CONNECT BATTERY

3. TURN ON (HOLD THE BUTTON)

CARE AND MAINTAINANCE

some tips for optimal durability and comfort.

4

We do not recommend to wash your gloves often, but sometimes it is necessary.

Remember to remove battery before washing.

1) Put your glove on and use a cloth with lukewarm water and soap. Squeeze the glove carefully after wash.

2) While the glove is still humid, you can apply leather care.

3) Gloves should be dried in room temperature. Hang them from the carabine loop, so they are dried upright. Avoid tumble driers, open flames, heaters and ovens.

4) Do not turn the gloves inside out. This could lead to misplacement of the liner, insulation or heating elements/cables.

HEATING LEVELS

Level	Temperature*	Indicator light	Duration*
I	45°C/113°F	Blue	5 hours
II	50°C/122°F	White	3.5 hours
III	55°C/131°F	Red	2 hours

EN

*The duration and given temperature will vary depending on ambient temperature and conditions.

CERTIFICATIONS

CAUTION

Keep out of high temperatures. The built-in polymer lithium battery may explode or be damaged if exposed of high temperatures or fire.

Do not charge unattended, use only original charger.
